(57) Abstract :

Abstract The present invention related to The present invention related to a novel synthesis and characterization of 1,2,4-triazole derivative and itTMs pharmacological activity. More particularly present invention The aim of the current study was to design and create substituted 1,2,4-triazol derivatives using both conventional and microwave methods Potent inhibitors of NUDTs silence hormone signalling in Brest cancer (MCF-7) for anti-cancer activity.In this present study various substituted 1,2,4-triazol derivatives were synthesized by conventional and microwave assisted method and screened for anticancer activity.
